Trith Lodge,
Sandy Lane,
Northwood,
Middx.

30.4.44.

My dearest Mother,

Thank you for your telegram of
congratulations.

I don't know what paper you
saw the news in. The only correct statement
was in the Times. The Mail & News Chronicle
said that I was Superintendent of Scientific
Research at the RAE — I was in 1939-40.
Until yesterday however, I was Director
of Special Projects in the M.A.P.

The Express referred only to my R101 period! In case you did not see the Times, the members of my Board are H.R. Ricardo (a famous engineer) Sir William Stamen (until recently Chief Engineer of the L.M.S.), S.H. Brown (a well known City solicitor), E.N. Plowden (a metal merchant), J.C.B Tulling and R.D. Williams (directors of the old Power Sets). I expect to have to spend half my time down in Leicester and half in London. We shall have to have in due course a house in

See the Midlands and a flat in London.

We intend to leave this house very soon.

My income will be considerably increased.

I expect you have gathered what it is all about. I have been working on jet propulsion since 1940, and in the last 18 months have done little else. My job has been the general coordination & direction of gas turbine and jet propulsion work in various factories here. Now I am going to run the pioneer firm, Power Jets, which has been bought by the Government, and

4
with which I have been closely concerned
for some time past. I shall spend
one day a week with the A.R.B., but
it is very unlikely that I shall
ever return full time to the A.R.B., though
I hope to remain associated with
them.

The boys go back on Tuesday.

We all send our love

Your own son

Harold
